## USB SOLAR POST LIGHT

## USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do **NOT** place your solar panel in shaded areas.

Do **NOT** charge behind glass

Thank you for choosing the London USB Solar Post Light. Please read these instructions carefully before using your light.

### Important notes

Always take care when installing your light. If you are at all unsure, please contact your retailer or a professional trades person for advice.

### Installation

Remove all packaging and put to one side. Please carefully consider where you wish to install your light before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc, or the shadows that these create. If the solar panel is installed in a poor location, it may not perform to the best of its ability.

### Charging your lights

Before you get started, you need to charge it up prior to use. Locate the switch which is situated on the underside of the top of the light. Ensure that the switch is turned off and leave the light for 3 day to build up a base charge.

Please repeat this charging process if your light runs low on charge at any time or doesn't appear to be staying on after dark for as long as expected.

To maximise the performance of this light and double the run time, spin the extra solar panel out on the top by 180° clockwise until it is secure in place. We recommend you use this in winter or if your solar panel is in a poor location.

### USB-C Charging

To charge the light via USB-C, locate the USB-C charging port on the underside of the solar panel. You can take your light inside to charge via USB-C cable.

Red LED light indicator: Charging

Green LED light indicator: Fully charged

1. Put the top upside down (solar panel down) in a dark room and locate the switch to turn the lights ON.
2. Choose your desired light output (white or warm white) via the 3-way switch.
3. The light will turn off when you flip the top back over when the ambient lighting from your surroundings hits the solar panel, as the panel will begin charging again.
4. Put the top back on the diffuser. When dusk falls, the light will activate automatically.

Please note that there is a 7 hour timer which will automatically turn off to preserve the battery life for the following day.

### Auto Power-saving

This light features intelligent power-saving mode and will reduce the brightness levels of the light over the duration of the night to extend the performance until the battery is depleted, or the 7 hour timer switches it off, whichever may come first.

## Troubleshooting

Please ensure that there are no nearby light sources shining on the solar panel after dark. These could be bright indoor/outdoor lights from your property, neighbours' or streetlights.

If you are unsure, take the light inside and test it in a dark room.

If you are encountering any problems with your light often you can resolve this by yourself by following our troubleshooting guide. If the light has its solar panel in a poor location it will struggle to work but this does not mean there is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. Please try the troubleshooting tips below before contacting your retailer.

## Recharge Procedure

1. Double check the location of your solar panel to ensure it is in a clear location and as South-facing as possible.
2. Turn the light off at the switch and leave it to recharge for 3-5 days ensuring at least one sunny day has passed, or use the USB cable to fully charge the battery.
3. After 3-5 days outside or a USB charge, return to the light and turn it back on at the switch.
4. If your light still does not illuminate after dark, please contact your retailer.

## Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleaning agents or chemical solutions as these may damage surfaces and impair operation. Keep the solar panel free of dirt, debris, and snow.

## Safety Instructions

The Solar Centre assumes no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe these instructions.

Unauthorised conversion and/or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C).
