Translated from Slovak to English - www.onlinedoctranslator.com

To start using the Ruuvi sensor, follow these simple steps.

1.Remove the plastic strip protruding from the device

The device will automatically turn on. Make sure the cover is completely closed.

RuuviTag: Check that the seal is in the groove and close the cover. **RuuviTag Pro:** Rotate the bottom cap until the device is completely closed.

2.Install the free Ruuvi Station mobile app and log in

Add your sensor to the app and confirm ownership on the sensor settings page. Real-time measurement data will start updating automatically.

Download Ruuvi Station: Android | iOS
More information about the application: Ruuvi Station QuickStart

3.Done

Customize the sensor to your liking by renaming it and choosing your own background image. You can now also configure alarms.

Viewing measurement history

The sensor stores historical data in its own memory at 5-minute intervals. You can sync the last 10 days of data to the app. If you own a Ruuvi gateway, designed specifically for remote monitoring, data from your sensors is continuously stored in the cloud. You can also view your cloud history at station.ruuvi.com

Warning

Not intended for children. Choking hazard. Contains lithium battery. Do not expose to direct contact with water (except RuuviTag Pro 2in1). Read complete instructions before use.
