## **PAVERLIGHT** SOLAR BRICK LIGHTS- SET OF 2

# **USER GUIDE**

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do NOT place your solar panel in shaded areas.

Do NOT charge behind glass

### Thank you for choosing the Paverlight Solar Brick Lights. Please read these instructions carefully before using your light.

#### Important notes

Always take care when installing your light. If you are at all unsure, please contact your retailer or a professional trades person for advice.

#### Installation

Remove all packaging and put to one side. Please carefully consider where you wish to install your light before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc, or the shadows that these create. If the solar panel is installed in a poor location, it may not perform to the best of its ability.

To maximise the battery capacity, the lights should be charged in direct sunlight for at least 12-24 hours before being used for the first time.

The lights will turn ON/OFF automatically when left in the on position. Please note it is completely normal for the lights to come on at different times as it depends on how fast they charge in their location.

#### Assembly

When deciding where to install your brick lights it is important to consider how much light they will get in your chosen location - this is particularly important for winter performance. The more light they receive during the day, the longer their performance at night. While every care has been taken in waterproofing the Brick Lights, please try to avoid waterlogged locations or areas that tend to accumulate standing water.

#### How to use

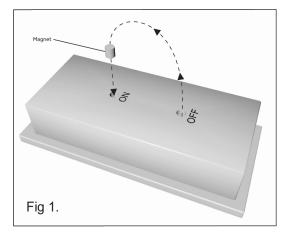

Turn your Paverlights on by placing the magnet switch on the underside of the light in the "ON" slot (see Fig.1). Fit the Brick lights in place as you would any other paving brick.

#### Troubleshooting

Please ensure that there are no nearby light sources shining on the solar

panel after dark. These could be bright indoor/outdoor lights from your property or neighbours, or street lights.

If you are unsure, take the light inside and test it in a dark room.

If you are encountering any problems with your Firefly Solar Garden Light, often you can resolve this yourself by following our troubleshooting guide. If the light has its solar panel in a poor location it will struggle to work, but this does not mean these is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. Please try the troubleshooting tips below before contacting your retailer.

#### **Recharge Procedure**

- 1. Double check the location of your solar panel to ensure it is in a clear location and as South-facing as possible.
- 2. Turn the light off at the switch and leave it to recharge for 3-5 days ensuring at least one day has passed.
- 3. After 3-5 days return to the light and turn it back on at the switch.
- 4. If your light still does not illuminate after dark, please contact your retailer.

#### Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions as these may damage surfaces and impair operation. Keep the solar panel free of dirt, debris, and snow.

Unauthorised conversion and/or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out of reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C.)
