

NEWBURY SOLAR GARDEN LIGHT

USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do NOT place your solar panel in shaded areas.

Do NOT charge behind glass

Thank you for choosing the Newbury Solar Garden Light. Please read these instructions carefully before using your light.

Important notes

Always take care when installing your light, especially when mounting it in high places. If you are at all unsure, please contact your retailer or a professional trades person for advice.

Specifications

- 1x Stainless steel solar light
- 1x 3.7 V Li-Ion battery (already inserted)
- 1x Stake mount
- 1x Instructions for use

Installation

Remove all packaging and put to one side. Please carefully consider where you wish to install your light before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc, or the shadows that these create. **If the solar panel is installed in a poor location, it may not perform to the best of its ability.**

1. Remove the lamp from the packaging and check you have everything you need.
2. To check the function of the lamp, remove the lamp cover and switch the lamp "ON" and place the lamp cover with the solar panel facing down on a smooth surface. The light should now turn on.
3. If the light is not activated during this test, the battery may have to be charged. Charge the battery with solar energy for at least one day.
4. Place the light head to one side to ensure there is no damage during installation.
5. Using the light post, screw the stake mount in and push into the ground in your desired location.
6. Return the light head to the pole.

Procedure to change the battery

1. Remove the lamp cover with solar panel by opening the bayonet catch by turning it to the left. To do this, pull the lamp cover straight up.
2. Turn off the light.
3. Open the battery compartment on the underside of the light cover by loosening the four screws and removing the battery compartment cover. **DANGER!** Carefully take the lid off.
4. Take care not to damage the cable connections. **Damage caused by improper battery replacement is not covered by the guarantee.**
5. Remove the battery from the battery compartment and detach it from the cable connection.
6. Put the new battery back in and connect it with the cable connection.
7. Close the battery compartment and screw the battery compartment cover tight with the four screws.
8. Turn on the light.
9. Reinsert the lamp accordingly and lock it with the bayonet catch by turning it to the right.

Battery Safety Instructions

1. Use only the batteries specified in the technical data or those of an equivalent type.
2. No dissimilar battery types or new and used batteries may be used together.
3. The battery must be inserted with the correct polarity.
4. Empty batteries must be removed from the light.
5. Use only batteries that are not damaged or have leaked electrolyte. Risk of chemical burns! Avoid any contact with leaked electrolyte.
6. If the solar light is not used for a long time, e.g. if it is stored, the switch must be set to "OFF" and the batteries must be removed.

Troubleshooting

Please ensure that there are no nearby light sources shining on the solar panel or motion sensor after dark. These could be bright indoor/outdoor lights from your property or neighbours, or streetlights.

If you are unsure, remove the light from its installed location and take the light inside and test it in a dark room.

If you are encountering any problems with your Newbury Light, often you can resolve this yourself by following our troubleshooting guide. If the Newbury has its solar panel in a poor location it will struggle to work, but that doesn't mean there is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. Please try the troubleshooting tips below before contacting your retailer:

Recharge Procedure

1. Double check the location of your solar panel to ensure it is in a clear location and as South facing as possible.
2. Turn the Newbury off at the switch and leave it to recharge for 3-5 days ensuring one sunny day has passed.
3. After 3-5 days return to the Newbury and turn it back on at the switch.
4. If your light still does not illuminate after dark, please contact your retailer.

Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions as these may damage surfaces and impair operation. Keep the solar panel free of dirt, debris and snow.

Safety Instructions

The Solar Centre assumes no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe these instructions.

Unauthorised conversion and/or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out of reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C).
