

MINI LONDON

USB SOLAR POST LIGHTS (SET OF 4)

USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do **NOT** place your solar panel in shaded areas.

Do **NOT** charge behind glass

Thank you for choosing the Mini London USB Solar Post Lights. Please Read these instructions carefully before using your light.

Important notes

Always take care when installing your light. If you are at all unsure, please contact your retailer or a professional trades person for advice. Always take care when setting up your London Solar Post Lights if the ground is very hard- sometimes watering the ground and allowing it to soak in can make it easier to install the ground spike.

Installation

Remove all packaging and put to one side. Please carefully consider where you wish to install your light before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc, or the shadows that these create. If the solar panel is installed in a poor location, it may not perform to the best of its ability.

1. If required, soften the ground with water, before pushing the spike gently into the ground. The spike is slotted into the light body on arrival, and will need to be gently pulled out.
2. Remove the protective film from the solar panel (if present) - this will be obvious if necessary.

Charging your London Solar Post Lights

Now you have assembled and positioned your light, you need to charge it prior to use. Gently ease the top of the light off by pulling upwards. Locate the switch which is situated on the underside of the top of the light. Ensure that the switch is turned on and leave the lights for 3-5 days to build up a base charge.

Please repeat this charging process if your light runs low on charge at any time or does not appear to be staying on after dark for as long as anticipated.

USB-C Charging

To charge the light via USB-C, locate the USB-C charging port on the underside of the solar panel. You can take your light inside to charge it via USB-C (included).

Using your London Solar Post Lights

1. Remove the top from the white plastic diffuser.
2. Put the top upside down (solar panel face-down) in a dark room and locate the switch to turn the light ON.
3. Choose your desired lighting output (white or warm white) via the 3-way switch.

The light will turn off when you flip the top back over when the light hits the solar panel as the panel will begin charging the battery again.

4. Put the top back on the diffuser. When dusk falls the light will activate automatically.

Troubleshooting

Please ensure that there are no nearby light sources shining on the solar panel after dark. These could be bright indoor/outdoor lights from your property or neighbours', or streetlights.

If you are unsure, take the light inside and test it in a dark room.

If you are encountering any problems with your light, often you can resolve this yourself by following our troubleshooting guide. If the light has its solar panel in a poor location it will struggle to work, but that doesn't mean there is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. Please try the troubleshooting tips below before contacting your retailer.

Recharge Procedure

1. Double check the location of your solar panel to ensure it is in a clear location and as South-facing as possible.
2. Turn the light off at the switch and leave it to recharge for 3-5 days ensuring one sunny day has passed, or use the USB cable to fully charge the battery.
3. After 3-5 days outside or a USB charge, return to the light and turn it back on at the switch.
4. If your light still does not illuminate after dark, please contact your retailer.

Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions as these may damage surfaces and impair operation. Keep the solar panel free of dirt, debris, and snow.

Safety Instructions

The Solar Centre assumes no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe these instructions.

Unauthorised conversion and/or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out of reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C).
